Professional Summary

DevOps/SRE Engineer with 6+ years of experience architecting and automating secure, scalable cloud infrastructure on AWS. Proven track record of building end-to-end CI/CD pipelines with Jenkins and Argo CD, orchestrating Kubernetes clusters with Istio and Helm, and managing infrastructure-as-code using Terraform and Ansible. Passionate about DevSecOps integrating SAST, DAST, and SCA tools directly into CI/CD workflows to reduce vulnerabilities pre-production by 25%. Experienced in building AI-driven observability platforms that predict and auto-remediate anomalies, cutting incident detection time by 50% and MTTR by 30%. Skilled in GitOps, cost optimization (FinOps), and leading cloud migrations that drive operational efficiency. Adept at mentoring cross-functional teams and partnering with Product to deliver reliable, high-impact software. Expanding expertise into Generative AI operations developing LLM applications, RAG pipelines, and multi-agent workflows to automate and enhance infrastructure management.

Skills

- Cloud Platforms: AWS (EC2, S3, VPC, IAM, CloudWatch, Lambda, SNS, EventBridge, SageMaker)
- Linux & Networking: Linux/Unix Administration (RHEL, Ubuntu, Amazon Linux); Networking: TCP/IP, DNS, Load Balancing, VPC, Subnets
- Infrastructure as Code: Terraform, AWS CloudFormation, AWS SAM
- Configuration Management: Ansible, Ansible Tower/AWX
- CI/CD & GitOps: Jenkins, Argo CD, Git, GitHub, Bitbucket, Maven, Gradle
- Containerization & Orchestration: Docker, Kubernetes, Istio (Service Mesh), Helm, Trivy (Container Security)
- Security & Compliance: Checkov, SonarQube, OWASP ZAP, OWASP Dependency-Check
- Monitoring & Observability: Prometheus, Grafana, ELK Stack, New Relic, CloudWatch; SRE Practices (SLIs, SLOs, Error Budgets)
- Programming & Scripting: Python (Advanced), Bash (Advanced), YAML/JSON (Advanced), Java/Node.js (Build/Pipeline Proficiency)
- Frontend Frameworks (Build/Deploy): Angular, React (Build & Deployment Automation)
- Databases: MySQL, PostgreSQL
- AI/ML Operations: Amazon SageMaker, Anomaly Detection, Predictive Monitoring, Random Cut Forest (RCF), Hugging Face (Bert)
- Generative AI & Agentic Workflows: LLM Application Development, RAG (Retrieval-Augmented Generation), Prompt Engineering, Multi-agent Workflows, AI Coding Assistants (Claude Code, GitHub Copilot)
- Incident & Collaboration: ITIL Change & Incident management, Jira, Confluence, Slack, PagerDuty
- Methodologies: DevSecOps, GitOps, Site Reliability Engineering (SRE), Agile/Scrum

Work Experience

DevOps/SRE Engineer

Cloudhight Consulting Limited, Dublin Ireland

September 2020 - Present

- Architected an AIOps Platform using AWS SageMaker, Lambda, and CloudWatch to predict and remediate infrastructure anomalies, reducing potential downtime by 45% through proactive detection and automated responses (SSM, SNS, Jira).
- Engineered and automated CI/CD pipelines using Jenkins and Argo CD, accelerating microservices deployment and integrating security tools (SonarQube, OWASP ZAP) to reduce vulnerabilities by 25% pre-production.
- Engineered multi-agent workflows that orchestrated separate AI agents (monitoring, remediation, notification) using event-driven architecture, decreasing incident resolution time by 30%.
- Adopted AI coding assistants (Claude Code, GitHub Copilot) to accelerate feature development, reduce boilerplate, and enforce best practices across the team
- Implemented Kubernetes orchestration with Istio and Trivy, enhancing security and optimizing traffic flow, which reduced latency in production clusters.
- Designed cost-optimized AWS architectures using auto-scaling groups and reserved instances, cutting monthly cloud spending.
- Established comprehensive monitoring with Prometheus, Grafana, and ELK Stack, decreasing incident detection time by 50% and MTTR by 30%.
- Mentored and coordinated cross-functional teams through agile ceremonies, improving sprint delivery consistency.

DevOps Engineer & Instructor

MotivaLogic Academy, Dublin Ireland

January 2019 – August 2020

- Designed and implemented DevOps architecture for 4 prototype products, establishing end-to-end CI/CD pipelines that reduced deployment cycles by 30% and improved release reliability.
- Developed comprehensive training curriculum for AWS, Terraform, Kubernetes, Docker, and Ansible, producing 15+ hours of instructional content (videos, labs, documentation) used by 40+ engineers across 2 continents.
- Led instructor-led workshops and hands-on labs for corporate clients and partners, achieving 95% student satisfaction and contributing to a 40% increase in certification pass rates.
- Engineered automated deployment scripts (Bash/Python) that streamlined environment provisioning, reducing setup time from hours to under 15 minutes.
- Integrated Jenkins and Maven into CI pipelines, automating build processes and reducing build failures by 25% through proactive debugging and collaboration with development/QA teams.
- Mentored junior engineers on cloud best practices, Git workflows, and infrastructure-as-code principles, accelerating onboarding time by 50% for new team members.

Data Entry Specialist

Intelics Solutions Limited

Feb 2017 – Jan 2019

- Entered and verified data into various databases, ensuring accuracy and completeness of information.
- Handle sensitive and confidential information securely, adhering to data protection regulations and company policies to maintain privacy and compliance.
- Conduct regular audits of data entry processes to ensure adherence to quality standards and identify areas for improvement.
- Developed and maintained accurate records and databases, ensuring data was up-to-date and organized for easy retrieval.
- Collaborate with various departments and team members to gather, verify, and integrate data, ensuring consistency across systems and departments.
- Assist in basic data analysis by summarizing data, identifying trends, and providing actionable insights to support decision-making.
- Provide training and support to new team members on data entry procedures, system usage, and best practices to ensure a smooth onboarding process.
- Identify opportunities for enhancing data entry processes and systems, propose and implement improvements to increase efficiency and accuracy.

Education

- (HND) Higher National Diploma in Computer Science
The Polytechnic, Oyo Ibadan - 2013/2018

Certifications

- AWS Certified DevOps Engineer - Professional
- DevOps Institute [DevSecOps Foundation]
- DevOps Institute [DevOps Engineer Foundation]
- MotivaLogic Academy Dublin Ireland [Certified DevOps Engineer]
- Cisco Networking Academy

Trainings

- | | |
|--|----------|
| • AIOPs Foundation Train-the-Trainer Workshop | May 2024 |
| • DevSecOps Practitioner Train-the-Trainer Workshop | Jan 2024 |
| • SRE Practitioner Train-the-Trainer Workshop | Jan 2024 |
| • Observability Foundation Train-the-Trainer Workshop | Jan 2024 |
| • DevOps Engineering Foundation Train-the-Trainer Workshop | Dec 2023 |
| • Cisco Network Academy Introduction to Cybersecurity | |
| • AWS Partner Technical and Sales | |
